

48.3mm Diameter Scaffolding Steel Tube For Building Scaffold Framework Construction

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: China
- Brand Name: Bythai Scaffolding
- Certification: SGS
- Model Number: BT01
- Price: \$5-\$18
- Packaging Details: In bundles
- Delivery Time: 7-15 days
- Payment Terms: TT/LC
- Supply Ability: 1000tons per month

Product Specification

- Standard: EN39
- Material: Galvanised Steel
- Tensile Strength: 420N/mm2
- Application: Scaffolding
- Yield Strength: 245N/mm2
- Diameter: 48.3mm
- Weight: 6.4kg/m
- Surface Treatment: Galvanised
- Highlight: **48.3mm Diameter Scaffolding Steel Tube, 245 N/mm2 Scaffolding Steel Tube, Building Construction Galvanised Scaffold Tube**

Product Description

Product Description:

Galvanised Scaffold Tube

The Galvanised Scaffold Tube is a high-quality product that is widely used in the construction industry for scaffolding purposes. This product is made from galvanised steel, making it strong, durable, and corrosion-resistant, making it the ideal choice for scaffolding applications.

Application

The Galvanised Scaffold Tube is primarily used for scaffolding applications. It is commonly used in the construction of buildings, bridges, and other structures, providing a safe and stable working platform for workers to perform their tasks.

Material

The Galvanised Scaffold Tube is made from high-quality galvanised steel, which is known for its strength, durability, and resistance to corrosion. The galvanisation process involves coating the steel with a layer of zinc, providing a protective barrier against rust and other forms of corrosion.

Strength and Standard

The Galvanised Scaffold Tube has a yield strength of 245N/mm² and a tensile strength of 420N/mm², making it a strong and reliable choice for scaffolding applications. It meets the standard of EN39, which ensures that the product is manufactured to the highest quality and safety standards.

Features

High-quality galvanised steel construction

Strong and durable

Corrosion-resistant

Meets EN39 standard

Yield strength of 245N/mm²

Tensile strength of 420N/mm²

Easy to install and dismantle

Compatible with BS1139 scaffolding tube and scaffold aluminum tube

Benefits

Provides a safe and stable working platform

Can support heavy loads

Long-lasting and low-maintenance

Suitable for use in various construction projects

Cost-effective solution for scaffolding needs

Conclusion

The Galvanised Scaffold Tube is a top-of-the-line product that offers strength, durability, and corrosion resistance. It is the perfect choice for all your scaffolding needs, providing a safe and stable working platform for construction projects. With its high-quality construction and compliance with industry standards, this product is a reliable and cost-effective option for any construction project.

Technical Parameters:

Attribute	Value
Product Name	Galvanised Scaffold Tube
Thickness	3.2mm

Diameter		48.3mm
Surface Treatment		Galvanised
Material		Galvanised Steel

Galvanised Scaffold Tube by Bythai Scaffolding

Brand Name: Bythai Scaffolding

Model Number: BT01

Place of Origin: China

Certification: SGS

Price: \$5-\$18

Packaging Details: In bundles

Delivery Time: 7-15 days

Payment Terms: TT/LC

Supply Ability: 1000tons per month

Introduction

Product Attributes

Name: Galvanised Scaffold Tube

Thickness: 3.2mm

Application: Scaffolding

Standard: EN39

Yield Strength: 245N/mm2

Product Description

Galvanised Scaffold Tube is made from high-grade steel, either through the hot dip galvanizing process or by using seamless or welded pipes. This process ensures that the tubes are durable, strong, and have high load capacity, making them suitable for use in scaffolding systems.

Application and Usage

The Galvanised Scaffold Tube is an essential component in any scaffolding system. It is used to provide a stable and secure platform for workers to perform construction and maintenance tasks at various heights. The tube's versatility also allows for its usage in various other applications, such as as a support beam for temporary structures or as a handrail for safety purposes.

Features and Benefits

Cost-effective: The Galvanised Scaffold Tube is an affordable option compared to other materials used in scaffolding systems.

Easy installation: The tubes are lightweight and can be easily assembled, saving time and effort during construction.

High load capacity: The tubes are designed to withstand heavy loads, ensuring the safety of workers and the stability of the structure.

Corrosion and weather resistance: The hot dip galvanizing process provides a protective layer on the tubes, making them resistant to rust and other weather conditions.

Reliable: Our tubes undergo rigorous testing and certification by SGS, ensuring their quality and reliability.

Why Choose Bythai Scaffolding?

China origin: Our tubes are manufactured in China, ensuring high-quality standards and competitive prices.

TT/LC payment: We offer flexible payment options to our clients.

Fast delivery: With a supply ability of 1000 tons per month, we can ensure timely delivery of our products.

Bythai Scaffolding brand: As a trusted brand in the industry, we are committed to providing top-notch products and services to our customers.
